### Objective

This report is prepared on behalf of *SHENZHEN TENDA TECHNOLOGY CO.,LTD.* in accordance with ETSI EN 301 893 V2.1.1 (2017-05), 5 GHz RLAN; Harmonised Standard covering the essential requirements of article 3.2 of Directive 2014/53/EU

The objective is to determine the compliance of EUT with ETSI EN 301 893 V2.1.1 (2017-05).

### Related Submittal(s)/Grant(s)

N/A

### Test Methodology

All measurements contained in this report were conducted with ETSI EN 301 893 V2.1.1 (2017-05).

## Measurement Uncertainty

According to the requirements of ETSI EN301 893,  $F_{lab}$  (the value of the measurement uncertainty according to the requirements of ETSI TR 100 028) shall be, for each measurement, equal to or lower than the figure in the following table:

| SN | Parameter                     | $F_{lab}$               | Maximum allowable uncertainty |
|----|-------------------------------|-------------------------|-------------------------------|
| 1  | RF Frequency                  | $\pm 1 \times 10^{-6}$  | $\pm 1 \times 10^{-5}$        |
| 2  | RF power conducted            | $\pm 0.61$ dB           | $\pm 1,5$ dB                  |
| 3  | RF power radiated             | $\pm 3.62$ dB           | $\pm 6$ dB                    |
| 4  | Spurious emissions, conducted | $\pm 2.47$ dB           | $\pm 3$ dB                    |
| 5  | Spurious emissions, radiated  | $\pm 3.62$ dB           | $\pm 6$ dB                    |
| 6  | Temperature                   | $\pm 1^{\circ}\text{C}$ | $\pm 2^{\circ}\text{C}$       |
| 7  | Humidity                      | $\pm 5\%$               | $\pm 5\%$                     |
| 8  | Time                          | 1%                      | $\pm 10\%$                    |

## Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Dongguan) to collect test data is located on the No.69 Pulongcun, Puxinhu Industry Area, Tangxia, Dongguan, Guangdong, China

Bay Area Compliance Laboratories Corp. (Dongguan) has been accredited to ISO/IEC 17025 by CNAS(Lab code: L5662). And accredited to ISO/IEC 17025 by NVLAP(Test Laboratory Accreditation Certificate Number 500069-0), the FCC Designation No. CN5002 under the KDB 974614 D01.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 273710. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

Bay Area Compliance Laboratories Corp. (Dongguan) was registered with ISED Canada under ISED Canada Registration Number 3062D.

## SYSTEM TEST CONFIGURATION

### Description of Test Configuration

The EUT was configured for testing in an engineering mode which was provided by the manufacturer.

The system support 802.11a/n ht20/n ht40/ac vht20/ac vht40/ac vht80.

For 5150~5250MHz band, 7 channels are provided to testing:

| Channel | Frequency (MHz) | Channel | Frequency (MHz) |
|---------|-----------------|---------|-----------------|
| 36      | 5180            | 44      | 5220            |
| 38      | 5190            | 46      | 5230            |
| 40      | 5200            | 48      | 5240            |
| 42      | 5210            | /       | /               |

For 802.11a, 802.11n ht20 and 802.11ac20, channel 36 were tested, for 802.11n ht40 and 802.11ac40, channel 38 were tested, for 802.11ac80, Channel 42 was tested.

### EUT Exercise Software

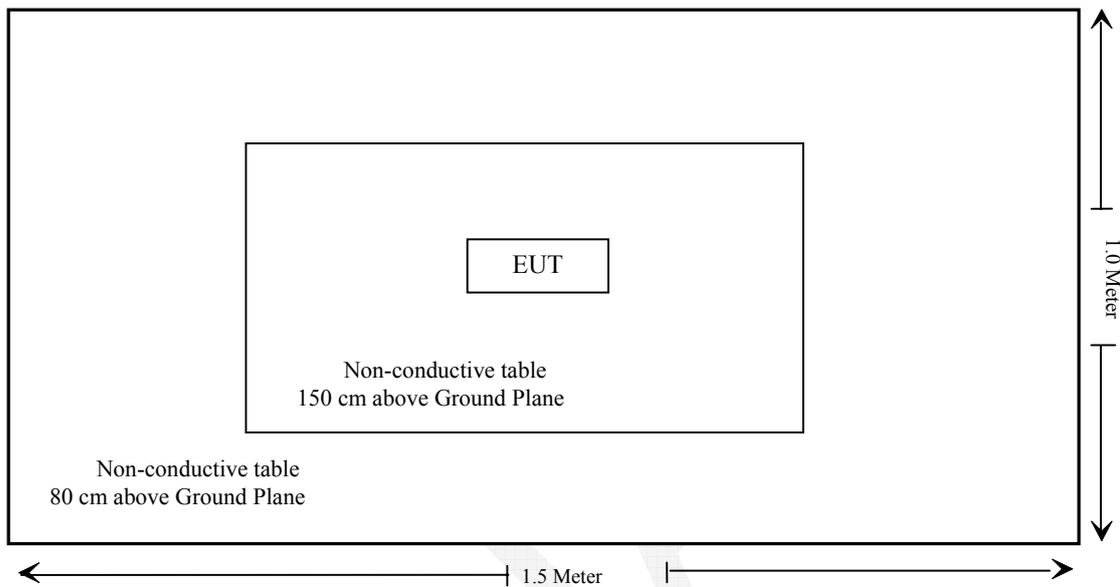

The software “MP\_TEST.exe” was used for testing, which was provided by manufacturer. The worst condition (maximum power with 100% duty cycle) was setting by the software as following table:

| Antenna 0/ Antenna 1 |                       |             |         |         |
|----------------------|-----------------------|-------------|---------|---------|
| Test Mode            | Test Software Version | MP_TEST.exe |         |         |
| 802.11A              | Test Frequency        | 5180MHz     | 5200MHz | 5240MHz |
|                      | Data Rate             | OFDM 6M     | OFDM 6M | OFDM 6M |

| § 4.2.10                                | Geo-location capability                                     | Not Applicable     |

Note: Compliance \*: Please refer to the product information declared by the manufacturer.

Not Applicable: The device has no this function.

## ETSI EN 301 893 V2.1.1 (2017-05) §4.2.1-NOMINAL CENTRE FREQUENCIES

### Definition

The centre frequency is the centre of the channel declared by the manufacturer as part of the declared channel plan(s).

### Limits

The actual centre frequency for any given channel declared by the manufacturer shall be maintained within the range  $f_c \pm 20$  ppm.

### Test Procedure

#### Test conditions

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.2

#### Test Equipment List and Details

| Manufacturer | Description                   | Model       | Serial Number | Calibration Date | Calibration Due Date |

|                 |         |                    | 0                | 12            | 5179.965  | 6.76                  | ±20         |
|                 |         |                    | 40               | 12            | 5180.086  | -16.60                | ±20         |

## ETSI EN 301 893 V2.1.1 (2017-05) §4.2.2- NOMINAL CHANNEL BANDWIDTH AND OCCUPIED CHANNEL BANDWIDTH

### Definition

The Nominal Channel Bandwidth is the widest band of frequencies, inclusive of guard bands, assigned to a single channel.

The Occupied Channel Bandwidth is the bandwidth containing 99 % of the power of the signal.

When equipment has simultaneous transmissions in adjacent channels, these transmissions may be considered as one signal with an actual Nominal Channel Bandwidth of 'n' times the individual Nominal Channel Bandwidth where 'n' is the number of adjacent channels. When equipment has simultaneous transmissions in non-adjacent channels, each power envelope shall be considered separately.

### Limits

The *Nominal Channel Bandwidth* for a single *Operating Channel* shall be 20 MHz.

Alternatively, equipment may implement a lower *Nominal Channel Bandwidth* with a minimum of 5 MHz, providing they still comply with the *Nominal Centre Frequencies* defined in clause 4.2.1 (20 MHz raster). The *Occupied Channel Bandwidth* shall be between 80 % and 100 % of the *Nominal Channel Bandwidth*. In case of smart antenna systems (devices with multiple transmit chains) each of the transmit chains shall meet this requirement.

The *Occupied Channel Bandwidth* might change with time/payload.

During a *Channel Occupancy Time (COT)*, equipment may operate temporarily with an *Occupied Channel Bandwidth* of less than 80 % of its *Nominal Channel Bandwidth* with a minimum of 2 MHz.

### Test Procedure

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.3

### Test Equipment List and Details

**ETSI EN 301 893 V2.1.1 (2017-05) §4.2.3- RF OUTPUT POWER, TRANSMIT POWER CONTROL (TPC) AND POWER DENSITY**

**Definition**

RF Output Power:

The RF Output Power is the mean equivalent isotropically radiated power (e.i.r.p.) during a transmission burst.

Transmit Power Control (TPC):

Transmit Power Control (TPC) is a mechanism to be used by the RLAN device to ensure a mitigation factor of at least 3 dB on the aggregate power from a large number of devices. This requires the RLAN device to have a TPC range from which the lowest value is at least 6 dB below the values for mean e.i.r.p. given in table 1 for devices with TPC.

Power Density:

The Power Density is the mean Equivalent Isotropically Radiated Power (e.i.r.p.) density during a transmission burst.

**Limits**

TPC is not required for channels whose nominal bandwidth falls completely within the band 5150 MHz to 5250 MHz

For devices with TPC, the RF output power and the power density when configured to operate at the highest stated power level of the TPC range shall not exceed the levels given in table 1.

Devices are allowed to operate without TPC. See table 1 for the applicable limits in this case.

**Table 1: Mean e.i.r.p. limits for RF output power and power density at the highest power level**

| Frequency range | Mean e.i.r.p. limit |                      | Mean e.i.r.p. density limit |                     |
|-----------------|---------------------|----------------------|-----------------------------|---------------------|
|                 | dBm                 |                      | dBm/MHz                     |                     |
| MHz             | with TPC            | without TPC          | with TPC                    | without TPC         |
| 5150 to 5350    | 23                  | 20 / 23 (see note 1) | 10                          | 7 / 10 (see note 2) |
| 5470 to 5725    | 30 (see note 3)     | 27 (see note 3)      | 17 (see note 3)             | 14 (see note 3)     |

NOTE 1: The applicable limit is 20 dBm, except for transmissions whose nominal bandwidth falls completely within the band 5 150 MHz to 5 250 MHz, in which case the applicable limit is 23 dBm.  
 NOTE 2: The applicable limit is 7 dBm/MHz, except for transmissions whose nominal bandwidth falls completely within the band 5 150 MHz to 5 250 MHz, in which case the applicable limit is 10 dBm/MHz.  
 NOTE 3: Slave devices without a Radar Interference Detection function shall comply with the limits for the band 5 250 MHz to 5 350 MHz.

For devices using TPC, the RF output power during a transmission burst when configured to operate at the west stated power level of the TPC range shall not exceed the levels given in table 2. For devices without TPC, the limits in table 2 do not apply.

**Table 2: Mean e.i.r.p. limits for RF output power at the lowest power level of the TPC range**

| Frequency range      | Mean e.i.r.p. (dBm) |
|----------------------|---------------------|
| 5250 MHz to 5350 MHz | 17                  |
| 5470 MHz to 5725 MHz | 24 (see note)       |

NOTE: Slave devices without a Radar Interference Detection function shall comply with the limits for the band 5 250 MHz to 5 350 MHz.

### Test Procedure

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.4

### Test Equipment List and Details

| Manufacturer | Description                   | Model  | Serial Number | Calibration Date | Calibration Due Date |

## ETSI EN 301 893 V2.1.1 (2017-05) §4.2.4.1- TRANSMITTER UNWANTED EMISSIONS OUTSIDE THE 5 GHZ RLAN BANDS

### Definition

Transmitter unwanted emissions outside the 5 GHz RLAN bands are radio frequency emissions outside the 5 GHz RLAN bands defined in clause 3.1.

### Limits

The level of transmitter unwanted emissions outside the 5 GHz RLAN bands shall not exceed the limits given in table 4.

**Table 4: Transmitter unwanted emission limits outside the 5 GHz RLAN bands**

| Frequency range      | Maximum power | Bandwidth |
|----------------------|---------------|-----------|
| 30 MHz to 47 MHz     | -36 dBm       | 100 kHz   |
| 47 MHz to 74 MHz     | -54 dBm       | 100 kHz   |
| 74 MHz to 87,5 MHz   | -36 dBm       | 100 kHz   |
| 87,5 MHz to 118 MHz  | -54 dBm       | 100 kHz   |
| 118 MHz to 174 MHz   | -36 dBm       | 100 kHz   |
| 174 MHz to 230 MHz   | -54 dBm       | 100 kHz   |
| 230 MHz to 470 MHz   | -36 dBm       | 100 kHz   |
| 470 MHz to 862 MHz   | -54 dBm       | 100 kHz   |
| 862 MHz to 1 GHz     | -36 dBm       | 100 kHz   |
| 1 GHz to 5,15 GHz    | -30 dBm       | 1 MHz     |
| 5,35 GHz to 5,47 GHz | -30 dBm       | 1 MHz     |
| 5,725 GHz to 26 GHz  | -30 dBm       | 1 MHz     |

### Test Procedure

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.5

**Test Equipment List and Details**

| Manufacturer   | Description       | Model                  | Serial Number | Calibration Date | Calibration Due Date |
|----------------|-------------------|------------------------|---------------|------------------|----------------------|
| Agilent        | Signal Generator  | E8247C                 | MY43321350    | 2017/9/23        | 2018/9/23            |
| R&S            | EMI Test Receiver | ESCI                   | 100224        | 2017/9/1         | 2018/9/1             |
| Sunol Sciences | Antenna           | JB3                    | A060611-1     | 2017/11/10       | 2020/11/10           |
| HP             | Amplifier         | 8447D                  | 2727A05902    | 2017/9/5         | 2018/9/5             |
| N/A            | Coaxial Cable     | C-NJNJ-50              | C-0400-01     | 2017/9/5         | 2018/9/5             |
| N/A            | Coaxial Cable     | C-NJNJ-50              | C-0075-01     | 2017/9/5         | 2018/9/5             |
| N/A            | Coaxial Cable     | C-NJNJ-50              | C-1000-01     | 2017/9/5         | 2018/9/5             |

| Farad          | Test Software     | EZ-EMC                 | V1.1.42       | N/A              | N/A                  |

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

**Test Data****Environmental Conditions**

|                           |                 |
|---------------------------|-----------------|
| <b>Temperature:</b>       | 24.3~25.8 °C    |
| <b>Relative Humidity:</b> | 28.5~38 %       |
| <b>ATM Pressure:</b>      | 100.8~101.3 kPa |

The testing was performed by Steven Zuo & Blake Yang from 2017-11-13 to 2017-11-15.

Test Mode: Transmitting

**Test Result:** Compliant.

| Frequency (MHz)                        | Polar (H/V) | Receiver Reading (dBμV) | Substituted Method      |                        |                 | Absolute Level (dBm) | Limit (dBm) | Margin (dB) |

Absolute Level = SG Level - Cable loss + Antenna Gain

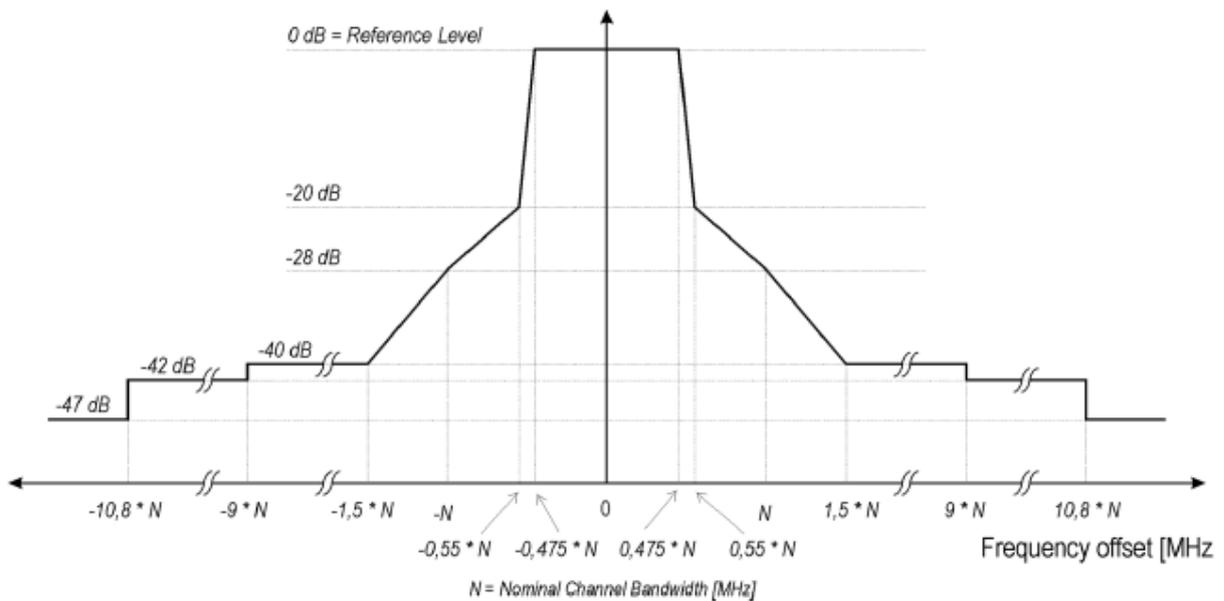

Margin = Limit- Absolute Level

## ETSI EN 301 893 V2.1.1 (2017-05) §4.2.4 .2-TRANSMITTER UNWANTED EMISSIONS WITHIN THE 5 GHZ RLAN BANDS

### Definition

These are radio frequency emissions within the 5 GHz RLAN bands.

### Limits

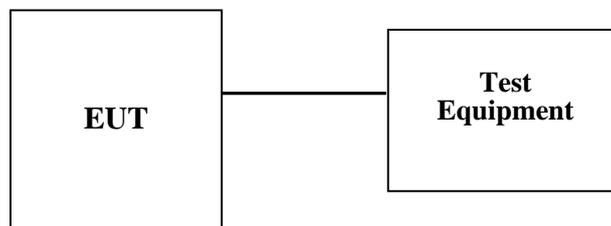

NOTE: dBc is the spectral density relative to the maximum spectral power density of the transmitted signal.

Figure 1: Transmit spectral power mask

### Test Procedure

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.6

### Test Set up Block diagram

## ETSI EN 301 893 V2.1.1 (2017-05) §4.2.5 – RECEIVER SPURIOUS EMISSIONS

### Definition

Receiver spurious emissions are emissions at any frequency when the equipment is in receive mode.

### Limits

**Table 4: Spurious radiated emission limits**

| Frequency range | Maximum power, ERP | Measurement bandwidth |
|-----------------|--------------------|-----------------------|
| 30 MHz to 1 GHz | -57 dBm            | 100 kHz               |
| 1 GHz to 26 GHz | -47 dBm            | 1 MHz                 |

### Test Procedure

According to ETSI EN 301 893 V2.1.1 (2017-05) §5.4.7

**ETSI EN 301 893 V2.1.1 (2017-05) §4.2.7 – ADAPTIVITY (CHANNEL ACCESS MECHANISM)**

**Applicable Standard**

According to ETSI EN 301 893 V2.1.1 (2017-05)§4.2.7, *Adaptivity (Channel Access Mechanism)* is an automatic mechanism by which a device limits its transmissions and gains access to an *Operating Channel*.

§4.2.7.3.2 Load Based Equipment:

*Load based Equipment* shall implement a *Listen Before Talk (LBT)* based *Channel Access Mechanism* to detect the presence of other RLAN transmissions on an *Operating Channel*.

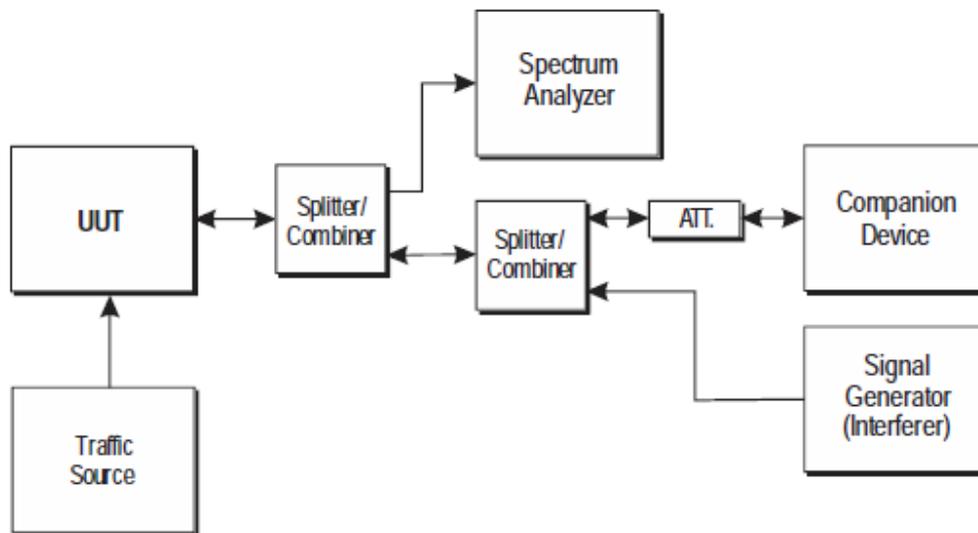

Limit:

According to ETSI EN 301 893 V2.1.1 (2017-05) &4.2.7.3.2

**Test Procedure**

According to ETSI EN 301 893 V2.1.1 (2017-05) &5.4.9.3.2

**ETSI EN 301 893 V2.1.1 (2017-05) §4.2.8 – RECEIVER BLOCKING**

**Applicable Standard**

According to ETSI EN 301 893 V2.1.1 (2017-05) §4.2.8, Receiver blocking is a measure of the capability of the equipment to receive a wanted signal on its operating channel without exceeding a given degradation due to the presence of an unwanted input signal (blocking signal) on frequencies other than those of the operating bands provided in table 1.

Limit:

The minimum performance criterion shall be a PER of less than or equal to 10 %. The manufacturer may declare alternative performance criteria as long as that is appropriate for the intended use of the equipment

While maintaining the minimum performance criteria as defined in clause 4.2.8.3, the blocking levels at specified frequency offsets shall be equal to or greater than the limits defined in table 7.

**Table 7: Receiver Blocking parameters**

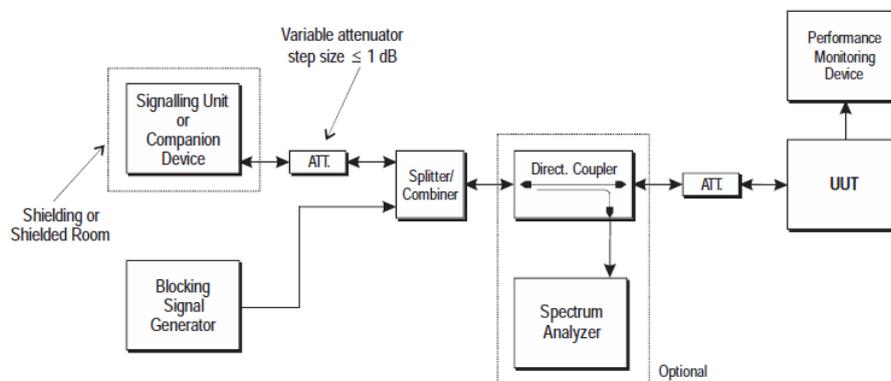

| Wanted signal mean power from companion device (dBm) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 2)                     |   | Type of blocking signal |
|--|---------------------------------|--|---|-------------------------|
|  |                                 | Master or Slave with radar detection (see table D.2, note 2) | Slave without radar detection (see table D.2, note 2) |                         |
| P <sub>min</sub> + 6 dB                              | 5 100                           | -53  | -59   | Continuous Wave         |
| P <sub>min</sub> + 6 dB                              | 4 900<br>5 000<br>5 975         | -47  | -53   | Continuous Wave         |

NOTE 1: P<sub>min</sub> is the minimum level of the wanted signal (in dBm) required to meet the minimum performance criteria as defined clause 4.2.8.3 in the absence of any blocking signal.  
 NOTE 2: The levels specified are levels in front of the UUT antenna. In case of conducted measurements, the same levels should be used at the antenna connector irrespective of antenna gain.

**Test Procedure**

According to ETSI EN 301 893 V2.1.1 (2017-05) &5.4.10

**Block Diagram of Test Setup**

**Figure 14: Test Set-up for receiver blocking**

**Test Equipment List and Details**

| Manufacturer | Description       | Model       | Serial Number | Calibration Date | Calibration Due Date |
|--------------|-------------------|-------------|---------------|------------------|----------------------|
| R&S          | EMI Test Receiver | ESPI        | 100120        | 2016/12/8        | 2017/12/8            |
| N/A          | Coaxial Cable     | C-SJ00-0010 | C0010/04      | Each Time        |                      |
| HP           | Attenuator        | 8494B       | 1510A05007    | Each Time        |                      |
| /            | ATKCPING          | V1.9.9.10   | /             | /                | /                    |

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

**Test Data**

**Environmental Conditions**

|                           |           |
|---------------------------|-----------|
| <b>Temperature:</b>       | 27.5 °C   |
| <b>Relative Humidity:</b> | 64 %      |
| <b>ATM Pressure:</b>      | 100.8 kPa |

*The testing was performed by Swim Lv on 2017-11-13.*

*Test mode: Receiving*

**Test Result: Compliant**

| Channel Frequency (MHz)      | Blocking Signal Frequency (MHz) | Blocking type | PER (%) | Limit (%) |
|------------------------------|---------------------------------|---------------|---------|-----------|
| <b>802.11a mode<br/>5180</b> | 5100                            | CW            | 2.11    | ≤10       |
